$$h = H_{t^\star,:}, \quad s_k = \langle W_{\ell_k,:}, h \rangle, \quad p = \mathrm{softmax}_K(s/\tau)$$

Axes	$d = 2560$, $V = 248320$; Single-question illustration; batch omitted. Tile counts encode axes, not literal sizes.
Objects	Gray: input/context; violet: hidden states; orange: parameter matrices; red: logits/probabilities. Positions, code IDs and owner maps are integers, not scores. Tiles show roles, not measured magnitudes.
Mechanism	All choices share one causal prompt; one next-answer position. Endpoint caps and temperature application are separate serving contracts. Candidate-only hard/soft CE; no EOS completion target. The inspected scorer gathers existing LM rows before FP32 multiplication.
